

 **TREMCO™**
SOUTH AFRICA

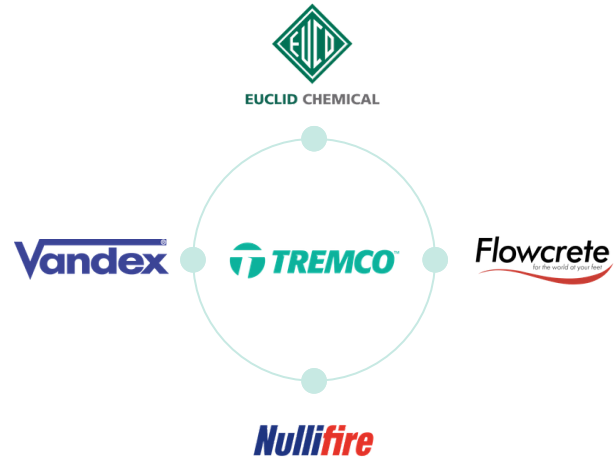

Tremco South Africa provides full building envelope protection from foundation to roof.

Tremco Construction Products Group (CPG) is a market leader in the manufacture of products, including seamless waterproofing systems, joint systems, durable sealants, repair solutions, and other specialized construction products and coatings.

Tremco South Africa is part of the larger global Tremco Construction Products Group, a division of RPM Inc., headquartered in Cleveland, Ohio (USA), and is expanding business opportunities across the subcontinent's construction chemicals industry.

RPM International Inc. is a \$5.6 billion conglomerate with a portfolio of subsidiaries that specialize in the manufacturing and marketing of high-performance coatings, sealants, and building materials.

Tremco Construction Products Group is a powerful union of some of the world's most trusted & leading chemical and coatings technology brands owned by RPM Inc. The complementary technologies and geographies of the businesses ensure that clients, wherever they are located, have access to its comprehensive product portfolio.

We deliver peace of mind to building owners and facility managers by managing roofing and building life cycles for customers in all industries, including education, healthcare, government, manufacturing and more.

Specification, technical detailing and on-site support

ISO Certified Manufacturing

100 years of trust and expertise in building material industry

Waterproofing solutions for new construction, roof restoration and repairs

Successfully installed across various projects globally and locally

Products designed for maximum protection from the elements

Eco-friendly construction solutions that boost efficiency and meet green building standards

A highly experienced and versatile team dedicated to delivering best-in-class service

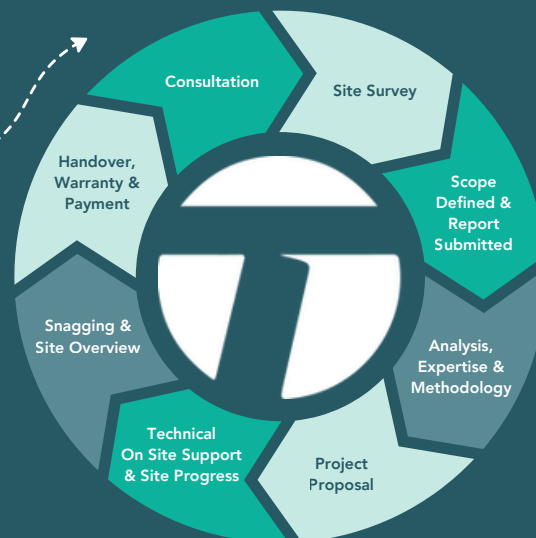

A wide range of colours and finishes to provide unlimited design potential for your building project

SINGLE POINT OF CONTACT

Tremco South Africa offers complete building envelope protection from foundation to roof, providing comprehensive roofing solutions for new builds and refurbishments.

Together with our Trusted Partners, we monitor the **Asset Managed Lifecycle Process** and issue warranties. Our aftercare team supports maintenance with planned preventative maintenance (PPM) programs, helping to prevent costly repairs and identify defects for long-term performance and peace of mind for occupants and stakeholders.

PRIMERS

SOLARPRIME AC

Single Component Water-Borne Acrylic Primer

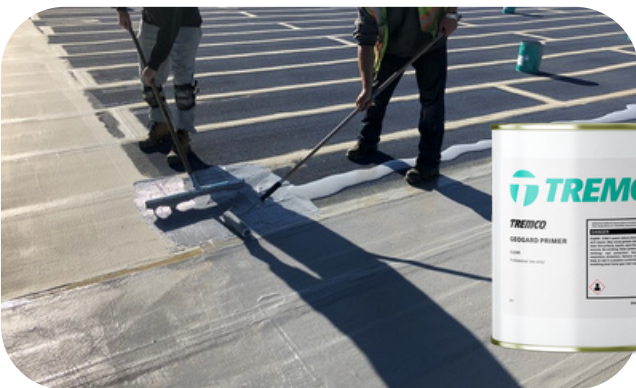

- Low odour
- Excellent flexibility
- Excellent corrosion protection with top coat
- Meets the most stringent VOC
- Suitable for sound water-based coating systems

PRO-STRUCT 601/610

Waterproofing and Curing Compound

- Water and oil resistance
- Enhanced abrasion resistance
- Promotes adhesion to bitumen substrate
- Improves bond of subsequent paint coats
- Extremely versatile and suitable for various applications

GEOGARD PRIMER

Primer for Urethane Based Liquid Products

- Single component
- Quick drying
- Penetrating primer
- Enhances adhesion
- Brush, roller or spray applied

SOLARMASTIC

Corrosion Protection Epoxy Mastic Coating

- Surface tolerant epoxy mastic
- Suitable as a topcoat
- VOC compliant to current AIM regulations
- Excellent rust and corrosion protection properties

LIQUID APPLIED WATERPROOFING SYSTEMS

ALPHAGUARD™ BIO

High Performance BIO-based Polyurethane Base and Top-Coat

- High bio-based content
- Odourless: Ideal for odour sensitive accounts
- Low VOC
- Can be applied to various roofing substrates
- Superior waterproofing system
- Can be applied over heat fused membrane with appropriate primer

TREMGARD MTX

High Strength Fast Curing Hybrid Urethane Waterproofing Coating

- Strong adhesion to wet and damp surfaces
- High mechanical properties
- Resistant to abrasion and UV degradation
- Low VOC and excellent flexibility
- High resistance to water and vapour ingress
- Can be applied over heat fused membrane with appropriate primer

CORROSION PROTECTION COATING & WATERPROOFING SYSTEMS

ALUMANATION® 301

Premium Reflective Fibered Aluminium Coating

- Surface tolerant
- Excellent rust and corrosion protection properties
- High reflectivity lowers rooftop temperatures and energy use
- Corrosion protection for 3, 5, 8 or 12 year warranties
- Waterproofing of heat fused membrane 10 years warranty

SOLARGARD® 6083

High Performance, Highly Reflective, Acrylic Elastomeric Coating

- Good durability
- Low temperature
- High flexibility
- Excellent resistance to weathering
- Low dirt pick-up
- Available in white and 16 colours
- Can be applied as a waterproofing system

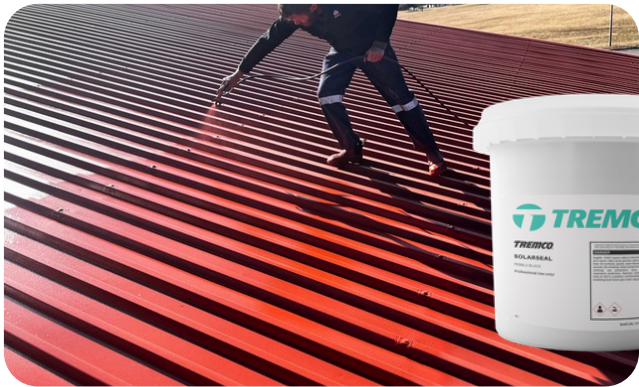

CORROSION PROTECTION COATING SYSTEMS

SOLARTHANE

Self-Priming, Anti Corrosive, Aliphatic Acrylic Polyurethane Coating

- Fast drying, high build
- Low VOC
- Good flexibility
- Good corrosion resistance
- Resistant to UV degradation
- UV stable direct to metal polyurethane coating

SOLARSEAL

Water-based Acrylic Protective Roof Coating

- Direct to metal coating
- Perfect for odour sensitive accounts
- Can be applied to various roofing substrates
- Delivers excellent weathering and dirt pick-up resistance

SOLARMASTIC

Corrosion Protection Epoxy Mastic Coating

- Surface tolerant epoxy mastic
- Suitable as a topcoat
- VOC compliant to current AIM regulations
- Excellent rust and corrosion protection properties

GUTTER SYSTEMS

ALPHAGUARD™ BIO

High Performance BIO-based Polyurethane Base and Top-Coat

- Shields gutters from water penetration, preventing corrosion and deterioration
- Reliable, long-term solution for gutter linings
- Can be applied over existing, sound heat-fused membranes

TREMGARD MTX

High Strength Fast Curing Hybrid Urethane Waterproofing Coating

- Handles ponding effectively
- Good flexibility & resistant to UV degradation
- Forms a flexible membrane upon curing, ideal for gutter lining waterproofing
- Can be applied over existing, sound heat-fused membranes

BENEFITS OF FIBRE REINFORCE PLASTIC (FRP)

Corrosion Resistant

Impact Resistant

Low Maintenance

Fire Resistant

UV Resistant

Slip Resistant

Long Service Life

Light Weight

High Strength to
Weight Ratio

Electrically & Thermally
Non Conductive

Low Installation
Cost

Fiber-reinforced polymer (FRP) presents a compelling alternative to traditional materials due to its exceptional corrosion resistance, minimal maintenance needs, and potential lifespan of up to 100 years. Its significantly lighter weight (around 70-75% lighter than steel or aluminum) facilitates easier installation, while its inherent dimensional stability, strength, toughness, and durability ensure long-term reliability. Furthermore, FRP offers cost savings over time, boasts a short production and installation period, and provides additional benefits such as electrical and thermal non-conductivity and slip resistance, making it a highly efficient and safer material choice.

STONGRATE ROOF WALKWAYS

- Stongrate's walkways provide an easy way to access roof services (Solar Systems, HVAC, Chiller Units, etc.) for any installation, cleaning, or maintenance services that need to be performed.
- The Stongrate support bracket design is lightweight and corrosion resistant, making use of stainless-steel fasteners and aluminium components.
- The roof access walkways consist of GRP moulded grating supported by Stongrate support brackets, which in turn clamp onto the IBR sheeting ribs. These provide an excellent non-slip, firm-grip surface in both wet and dry conditions.

FRP CABLE MANAGEMENT SYSTEMS

Stongrate FRP cable management systems are manufactured for a comprehensive array of cable management requirements, our systems are designed and manufactured with sturdy but lightweight components, making handling and installation of these systems easy and effortless.
